EDUCATION

North Carolina State University

B.S. Computer Science (Artificial Intelligence), Minor in Business Administration

GPA – 3.55 / 4.0

Raleigh, NC

Aug. 2023 – May 2027

EXPERIENCE

TA - CSC 201: Fundamentals of Applied AI for Engineering

Jan. 2026 – Present

North Carolina State University

Raleigh, NC

- Lead weekly lab sessions for 20+ engineering students from 5+ majors, teaching Python, Jupyter Notebook and applied AI through hands-on lab tutorials and exercises.
- Mentor Students in machine learning fundamentals, computer vision, neural networks, image processing, providing technical guidance on assignments and semester projects.
- Support course instruction by answering technical questions, debugging student code and providing constructive feedback while upholding academic integrity.

Operations Manager - NC State Student Centers

Aug. 2023 – Present

North Carolina State University

Raleigh, NC

- Coordinate operations for a 250,000+ sq. ft. student facility, leading teams of 4-10 staff members while supporting 20+ campus events each week, serving as a primary point of contact for operational escalations during assigned shifts.
- Promoted through multiple operational roles based on leadership, initiative, and consistent performance in managing facility operations and event logistics.
- Train and mentor new staff on operational procedures, safety protocols, and customer service, ensuring consistent service quality across diverse campus events.

PROJECTS

VisualSQL | *Java, Spring Boot, React, TypeScript, JUnit, JSQParser, Maven*

July 2026 – Present

- Designed a Spring Boot backend that parses SQL DDL into graph-based ER models using JSQParser.
- Built a modular parsing pipeline for primary keys, foreign keys, relationships, and DTO mapping exposed through a REST API.
- Developed comprehensive JUnit tests and GitHub Actions CI for automated backend validation.

JGaffer | *Java, Spring Boot, React, TypeScript, FastAPI, ChromaDB, OpenAI, PostgreSQL*

Jan. 2026 – Present

- Designed a three-tier architecture with Spring Boot, React, and FastAPI to power AI-driven football tactics analysis.
- Engineered a RAG pipeline using ChromaDB and GPT-4o-mini to generate grounded tactical explanations from football match data.
- Built an interactive tactical puzzle engine using graph visualizations and machine learning to evaluate passing options in real time.

JobTrail | *Java, Spring Boot, React, PostgreSQL, JWT, OpenAI*

Jan. 2026 – Present

- Developed a full-stack job application tracker with secure JWT authentication, PostgreSQL persistence, and resume management.
- Built REST APIs for application tracking, analytics, and AI-assisted job posting parsing using GPT-4o-mini.
- Integrated Clouinary, PDFBox, and React dashboards to manage resume versions and visualize job search analytics.

TECHNICAL SKILLS

Languages: Java, Python, C, SQL (Postgres), JavaScript, HTML/CSS

Frameworks: Spring Boot, React, JUnit, FastAPI, Spring Security

Developer Tools: Git, Github Actions, Docker, Maven, OpenAI API, VS Code, IntelliJ, Eclipse, MongoDB, ChromaDB

Libraries: pandas, NumPy, Matplotlib, Axios, JSQParser
